1 two-sum

<https://leetcode.com/problems/two-sum/>

Given an array of integers `nums` and an integer `target`, return indices of the two numbers such that they add up to `target`.

Example 1:

Input: `nums = [2,7,11,15]`, `target = 9`

Output: `[0,1]`

Explanation: Because `nums[0] + nums[1] == 9`, we return `[0, 1]`.

```
#include <iostream>
#include <vector>
#include <unordered_map>

using namespace std;

vector<int> twoSum(vector<int>& nums, int target) {
    unordered_map<int, int> numIndexMap;

    for(int i = 0; i < nums.size(); i++){
        int complement = target - nums[i];
        if(numIndexMap.find(complement) != numIndexMap.end()) {
            return {numIndexMap[complement], i};
        }
        numIndexMap[nums[i]];
    }
    return {};
}

int main() {
    vector<int> nums = {2, 7, 11, 15};
    int target = 9;
    vector<int> result = twoSum(nums, target);
    if(!result.empty()) {
        cout << result[0] << " " << result[1] << endl;
    }
}
```

```
    }else{  
        cout<<"NO"<<endl;  
    }  
    return 0;  
}
```
